

Fully automatic sheet arrival control ensures non-stop production

- Continuous monitoring of sheet arrival
- That means: systematic avoidance of stoppers at the feeder
- **Net production speed is significantly higher** in comparison to a machine without control system

Example:

- Production speed: 15,000 sh./h
- 2 Minutes per stopper, depending on printing stock and pile quality
- 2-4 stopper less per production hour compared to systems without sheet arrival control

+ 1,000 S/h
