

# Automatic Non-Stop Delivery

Advantages for the industrial packing printer:

Base: Speedmaster CX 102- 6-L with full logistic components and automatic non-stop at the delivery

- An expected increase of the average production speed thanks to the automatic nonstop system of up to 500 sheets/h may entail a productivity increase of about **5%**
- At the same time, the number of waste sheets can be reduced by **2%**.

## Non-Stop System with high flexibility

- Automatic Non-Stop also beneficial for commercial printers
- For example:

Job with a run length of 48000 (8000 sheets/palette)

Commonly a blanket wash is taking place after every pile = 5 times

With automatic Non-Stop reduced to 3 wash cycles

## Non-Stop System with high flexibility

- For Label printers which run foils or aluminum coated paper racking is an additional option
- This is also interesting for a short run commercial printer e.g. web to print or a highly industrialized commercial printer.

Automatic non-stop delivery universal system with racking device
