

Prinect Press Center 2

70 % fewer Operating Steps with Intellistart

- Intellistart compares the current press status with the parameters for the new job and generates all the steps needed to change jobs intelligently and dynamically on the basis of this comparison
- Intellistart provides projectable setup times and constant time savings with each job change
- Intellistart reduces distances between control station and printing press, as well as downtimes
- Compared to setup without Intellistart, operating steps are reduced by 70 % on average, depending on the complexity of the job change (see following chart)

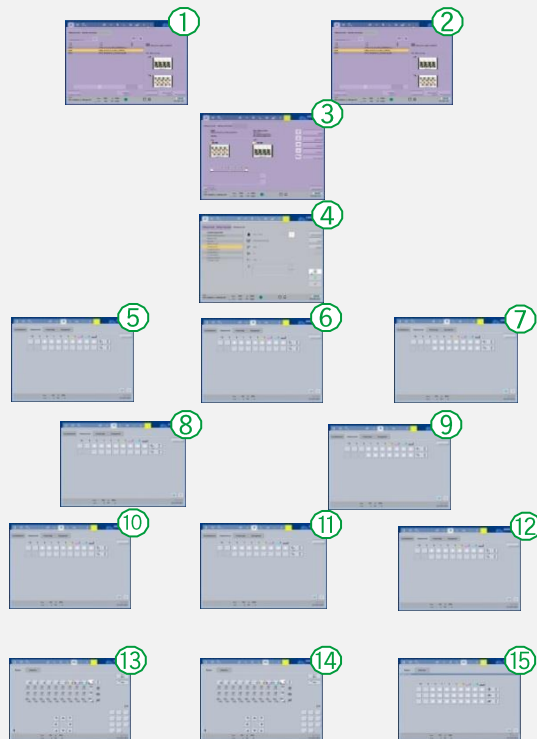

Prinect Press Center 2

70 % fewer Operating Steps with Intellistart

-70 % operating steps

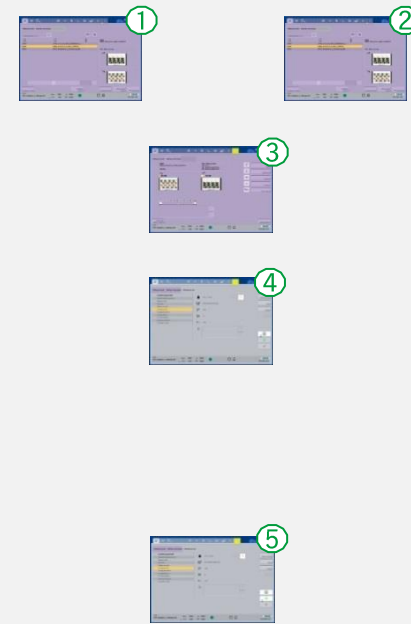

Setup steps without Intellistart:

A 15 keystrokes – completely manual creation of the makeready program

Setup steps with Intellistart:

B 5 keystrokes – fully automatic, intelligent creation of the makeready program

* Example of a repeat job, 4C

Intellistart – up to 8% more Production Capacity

- Field tests at customers side have shown that over 1 minute can be saved during each job change
- When calculating these savings, an additional production capacity of up to 8 % per year (depending on the number of orders) results, see following chart
- The savings are greater, the more job changes and activities are required during setup

Intellistart – up to 8% more Production Capacity
