

# Highest Production Speed

## For a wide Printing Material Spectrum

- Controlled sheet travel – presetable and speed compensated air guidance from feeder to delivery
- Smooth sheet travel – double-sized cylinder concept
- Coordinated technique – different feeder suction tape air settings, dryer round nozzles technology in combination with Venturi technology, gripper bar geometry, etc.
- A perfect end – plane slow down of the printed sheet, tool free adjustment of the sheet brakes (modules can be placed outside in diagonal direction as well as the inclination) delivery air system with honeycombs, etc.

## Benefits

- Stable top speed of 15,000 sph for light-weight paper to cardboard thanks to innovative solutions from Heidelberg
