The facility in Brandenburg an der Havel — about 75 kilometers southwest of Berlin — has been one of Heidelberger Druckmaschinen AG's (HEIDELBERG) key production sites since 1991. As part of the company's production network, this facility manufactures high-quality mechanical components and complex assemblies that are used both in the internal production of printing presses and for external industrial customers.

In a production facility spanning approximately 30,000 square meters, nearly 380 employees manufacture a wide range of components, including shafts, rollers, cubic components, and a large portfolio of assembled subassemblies. The range of services is complemented by specialized technologies such as induction hardening and friction welding, which make the site an important center of expertise within the HEIDELBERG production network.

In total, around 4,500 different items are manufactured in Brandenburg—ranging from individual components to ready-to-install assemblies. The combination of decades of expertise, in-house training, modern manufacturing technology, and high process stability makes the facility a reliable partner for precision manufacturing.

# Press Information

**About HD Advanced Technologies:**

HD Advanced Technologies GmbH is a wholly owned subsidiary of Heidelberger Druckmaschinen AG (HEIDELBERG), combining industrial expertise in the areas of defense, security, and energy. The aim is to establish new technological business areas based on the Group's existing manufacturing, integration, and system expertise.
