

HEIDELBERG Installs Latest Generation Press Technology

By Africa Print - 27th Sep 2022

Ferit Dansik, Printpark; Selkut Engin, Heidelberg Turkey and Duran Dansik, Printpark.

Printpark is looking to maximise productivity at their print shop with the latest generation of a Speedmaster XL 106-7+LX-UV from HEIDELBERG. The press is equipped with Push to Stop technology for autonomous printing and also features the new Prinect Inpress Control 3 inline colour measurement system. The press is also fully integrated into the print shop's overall workflow via Prinect Production Manager.

Ferit Dansik, Managing Director of Printpark, commented, 'When we upgraded our production line, the most important criteria were highly productive production and extensive automation. Extensive analyses in the run-up then showed that the Speedmaster XL technology was most likely to meet our requirements. In addition the competent and experienced technical service staff of HEIDELBERG Turkey was also a decisive factor in our investment decision.'

Turan Dansik, Plant Manager at Printpark added, 'We are very satisfied with the experience and results we have had so far. The new Speedmaster XL 106 has fitted very well into our production processes with the support of Prinect, and the assistance systems for autonomous printing and the new colour measurement system have helped us achieve a significant leap in productivity, especially with the many job changes.'

Printpark Premium Folding Carton is a Turkish family business with around 100 employees that has been operating in Istanbul for 48 years. It is currently run by second generation

owners Ferit and Turan Dansık. Its products, whose production and R&D activities are carried out entirely within the company, include high-quality cardboard packaging for the cosmetics, food, chocolate, beverage and textile industries.
