“Perfect from all sides” –

HEIDELBERG launches new-generation Speedmaster SX 102

5 September 2022 Heidelberg, offset printing, Prinect Press Center XL 3, Print technology, Speedmaster SX 102

Heidelberger Druckmaschinen AG (HEIDELBERG) is investing heavily in taking its core business to the next level. “Perfect from all sides” is the slogan for the market launch of the company’s new-generation Speedmaster SX 102, which has been enhanced in line with customer requirements.

This press is aimed primarily at commercial print shops that require a high level of productivity and top-quality perfecting

NEWS

UK packaging market to grow by 1.3% CAGR between 2021-26, driven by

printing. Typical areas of use range from brochures and commercial print products to inserts for pharmaceutical packaging, and therefore include applications involving very thin materials that need to be produced in a single pass.

The basic model offers an excellent price-performance ratio, with configurations extending all the way through to an autonomous Push to Stop perfecting press. The new 92 format option (650 x 940 millimeters) cuts printing plate costs by up to 20 percent compared with the conventional 102 sheet format (720 x 1020 millimeters), which is also available. This is a key economic consideration, especially given the sharp rise in raw material prices.

Customers benefit from Speedmaster XL technology transfer

The new Speedmaster SX 102 is designed as a scalable press. Depending on the range of applications and the output/automation requirements, the basic model can be equipped with tried-and-tested HEIDELBERG perfecting technology and many other assistance systems transferred from Speedmaster XL technology. These include Intellistart 3, Intelliline, Intellirun, Wash Assistant, Powder Assistant, among others. If required, the configuration can be extended all the way through to Push to Stop for autonomous printing. With the help of artificial intelligence, the digital assistance systems also achieve a further significant reduction in the number of manual interventions by operators. Besides saving time, this also means there is less risk of errors.

Thanks to the Prinect Press Center XL 3 and the Prinect workflow, the Speedmaster SX 102 can be fully integrated into a print shop's overall workflow, which ensures efficient data management, precise presets, up-to-date production data and informative reports. The Preset Plus feeder and delivery have also been taken over from XL technology, along with further proven solutions. The maximum printing speed is 14 000 sheets per hour in perfecting mode.

SAI Appoints Eyal Friedman to Vice President of Product

The Speedmaster SX 102 features an innovative, ergonomic design with a new gallery and guards that also come from the Speedmaster XL series. The HEIDELBERG User Experience (UX) provides staff with a modern working environment. The end-to-end ergonomics extends to the operation of every single component. By making life easier for operators with its user very friendly navigation, the Prinect Press Center XL 3 with Speedmaster Operating System delivers predictable results and boosts performance. The various available Prinect colour measurement systems focus on reproducible colour stability and minimal paper waste.

‘With the new Speedmaster SX 102, we are once again emphasising our technology leadership,’ says Stefan Hasenzahl, Head of Product Management at HEIDELBERG. ‘Our customers benefit from a scalable press that can be fully integrated and, if necessary, adapted to their precise requirements using a whole host of established assistance systems from our Speedmaster XL solutions,’ he adds.

HEIDELBERG 102 format class a popular choice for decades

HEIDELBERG has been offering the 102 format class since back in 1975. In this segment, too, it is the market leader by some margin. To-date, the company has sold well over 100 000 printing and coating units in this format class.

‘I’m confident we will continue this success story with the new Speedmaster SX 102. The press makes high-tech solutions affordable to a great many print shops, who also benefit from the industry’s largest and most efficient service network,’ concludes Hasenzahl.
